SAFETY

STATIC ELECTRICITY

Are your fabrics antistatic? Are antistatic fabrics compulsory? Is a conductive drainage grid sufficient?

Click on www.batch-centrifuges.com/en to know more

VISCO DAMPERS

What are the suspensions and dampers used for? Should you replace them? How to know if they are in good condition?

Click on www.batch-centrifuges.com/en to know more

VIBRATIONS / WAVES

The vibration sensor does not always work on your centrifuges?
Do your centrifuges sometimes stop due to vibrations? You do not know origin of the vibrations, irregular solid or wave of liquid?
Your operators can not always calm the vibrations?
Our expert can help you! Contact us.

SERVICES

TRAINING ON SITE (ONLY IN FRENCH)

A field training, practical, full of common sense... so that your operators understand what is happening and know how to react

A good way to reduce risk, improve quality, the yields, the reproducibility...

AUDIT - EXPERTISE

An audit of 2 days to review the possible improvements on your centrifuges: driving, equipment, installation, safety, ergonomics of the workplace...

Get the most out of your centrifuges!

TECHNICAL ASSISTANCE

1 day to solve a specific problem: quality, vibrations, elimination of the residual layer, fixation of the filter cloth, process a new product...

In case of new centrifuge investment, we can accompany you.

Use our services... to save time and money!

EQUIPMENTS

INTERNAL EQUIPMENTS

A question about feeding or washing pipes, filling controllers, residual layer removal systems?
Contact us!

EXTERNAL EQUIPMENTS

The viscodampers are a security organ. They are often neglected, and in poor condition!
The sight glasses and lighting are also fundamental to work properly.
Do not stay with your archaic solutions!

VIBRATOPE

Intelligent vibration analyzer for batch centrifuges, able

- to see all the dangerous phenomena
- to differentiate the origins of the vibrations

The operator and / or the PLC know in real time the origin of the vibrations, and can thus react fast and appropriately.

SPARE PARTS OF FILTRATION

FILTER CLOTHS

- Technical fabrics, FDA, antistatic, without release of fibers ...
- Patented filter cloths with quick installation

OPLA AND OPLAPHARMA FILTER CLOTHS

Filter cloths with welded PP hoops ... very easy to install, reusable, available with all types of fabrics, usable for all types of baskets without any modification.

No more metal hoops and ropes!

SCREENS OF DRAINAGE

Efficient to reduce residual moisture and / or cycle time.

Essential to limit liquid accumulation, thus reducing the importance of the liquid unbalances (waves).

ROPES AND PROFILES

- PP ropes with round or square sections
- Hardness suitable for mounting by tamping (batch centrifuges, filters...)
- Completely white, without any thread/fiber release.
- OK for food contact and pharmaceuticals applications
(FDA 21 CR 177.1520 and CE 1935/2004)

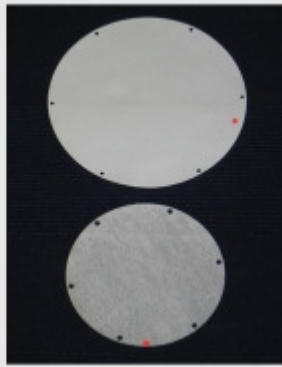

FILTRATION ITEMS OF KOGEL FILTER

OPE is the agent of **KOGEL FILTER-CONTECMA FILTRATION** in FRANCE, French speaking BELGIUM and SWITZERLAND

Bags and filter cloths
for batch centrifuges

Discs for Powder
Transfer pumps

Bags for dryers,
filters

SECOND HAND EQUIPEMENT

A way of thinking...

- ▶ allow sites that close a workshop, to better value their process equipment, rather than scrape or sell off.
- ▶ allow final users to buy equipment in good condition, at a lower cost.
